OUR PROMISE

Useful AI, not AI hype.

We focus on everyday business moments where delay, missed follow-up or scattered information silently costs money.

A Answer customers quickly

Give customers and staff quick, consistent answers from approved business knowledge, policies, FAQs and current process notes.

F Protect every lead

Capture enquiries, qualify intent, remind prospects and push the next best action before opportunities go cold.

O Run cleaner operations

Move repetitive daily work from scattered manual effort into visible, accountable workflows with human approval where needed.

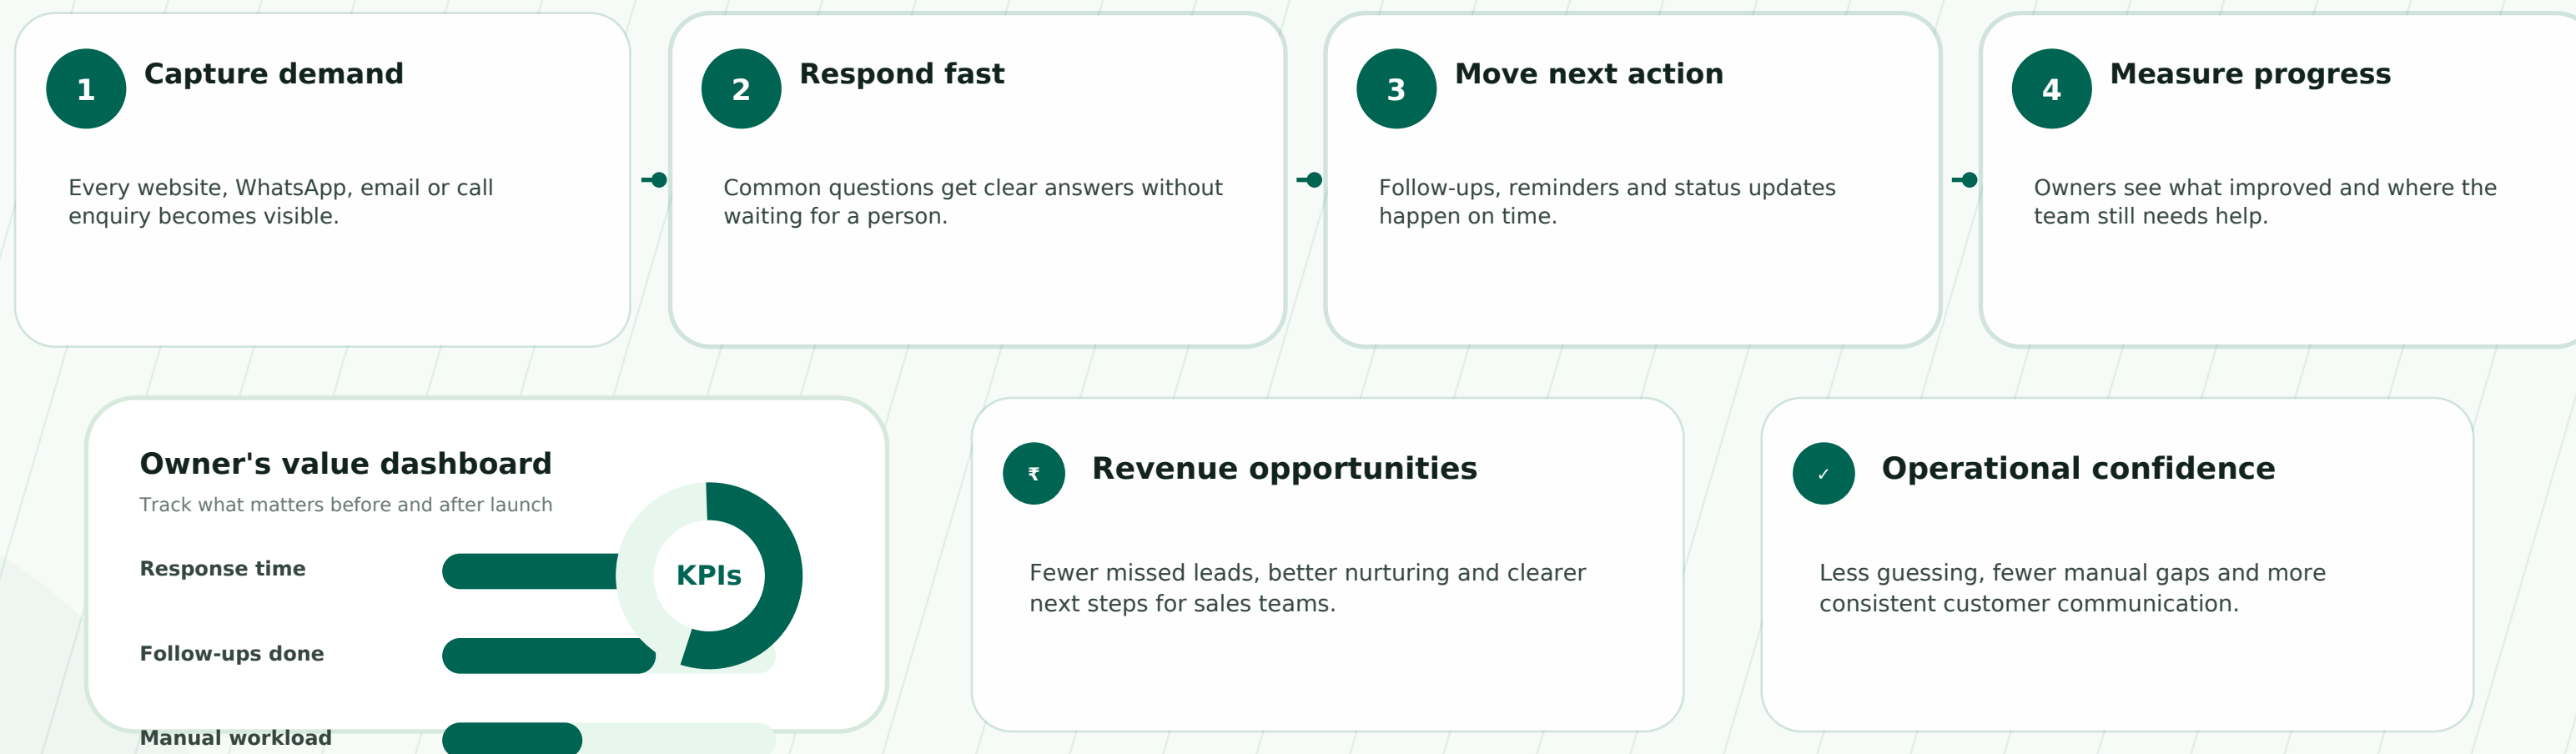

What makes LetssAI different

- We speak in business outcomes first: lead response, follow-up discipline, workload, visibility and customer experience.
- We build around your current process instead of forcing your team to adopt a complex new system.

WHERE VALUE SHOWS UP

AI should make business easier to run.

The first question is not 'Which tool should we use?' The first question is 'Which business result should improve first?'

WHAT WE BUILD

Practical AI services for growth and operations.

Each offering is designed to solve a clear business problem, launch in stages and improve through measurable feedback.

1 AI Customer Support

Website, WhatsApp or email assistants that answer repeat questions and hand off complex cases.

2 AI Sales & Lead Follow-up

Lead qualification, reminders and next-action prompts so enquiries do not sit untouched.

3 AI Knowledge Assistant

A private assistant for your team to ask questions across approved documents and SOPs.

4 AI Marketing Assistant

Campaign ideas, content drafts, approvals and repurposing support for busy teams.

5 AI Calling & Booking

Appointment, reminder and feedback calling workflows with clear human escalation.

6 AI Workflow Automation

Daily repetitive work connected into simple, trackable flows across teams.

7 AI System Integration

Connecting AI with your existing CRM, forms, email, dashboards and business tools.

SERVICE 01

Customer conversations that do not get stuck.

For owners who lose time answering the same questions or miss enquiries because the team is busy.

P Business problem

Customers ask about pricing, availability, process, documents, status and next steps. When answers are slow, trust drops and leads move elsewhere.

B What LetssAI builds

A business-trained assistant that answers common questions, collects context and routes sensitive or high-value cases to the right person.

K Outcome to track

First response time, repeated question load, missed enquiries, handoff quality and customer satisfaction.

1 Customer asks

Website, WhatsApp, email or form enquiry arrives.

2 Assistant checks knowledge

Answers only from approved company information.

3 Human handoff

Complex, urgent or sensitive cases are assigned.

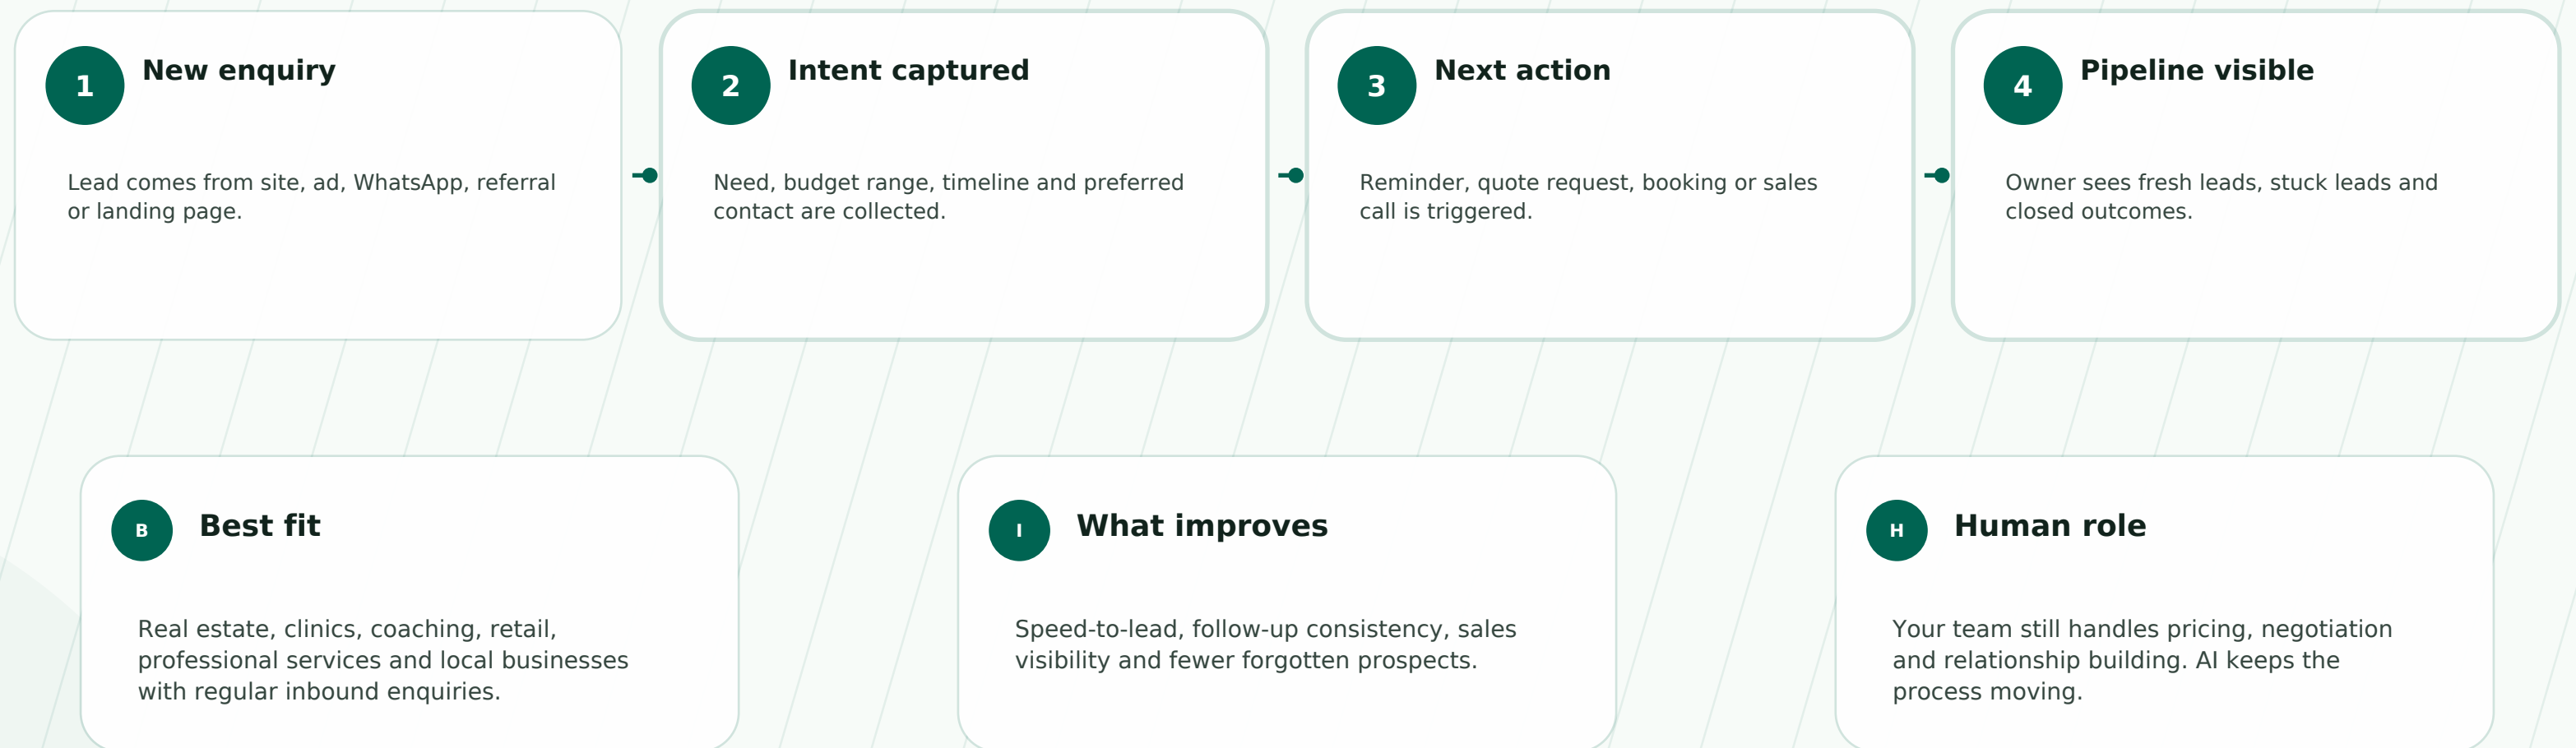

4 Owner sees trends

Frequent questions become content and process improvements.

SERVICE 02

Follow up before the opportunity goes cold.

Most small and mid-sized businesses do not have a lead problem only. They also have a response-time, qualification and follow-up-discipline problem.

SERVICE 03

Put business knowledge where the team can actually use it.

When answers live across folders, chats and old documents, teams waste time and customers receive inconsistent information.

Approved business knowledge

- **Policies** Current rules and customer commitments
- **SOPs** How your team should complete repeat work
- **FAQs** Answers customers and staff ask often
- **Documents** Forms, checklists, service notes and guides

T Team assistant

Staff ask questions in plain language and receive short, practical answers from approved content.

A Admin improvement

Missing or unclear answers become a task for updating the knowledge base.

C Cited answers

Important answers can point back to source documents so the team knows where the response came from.

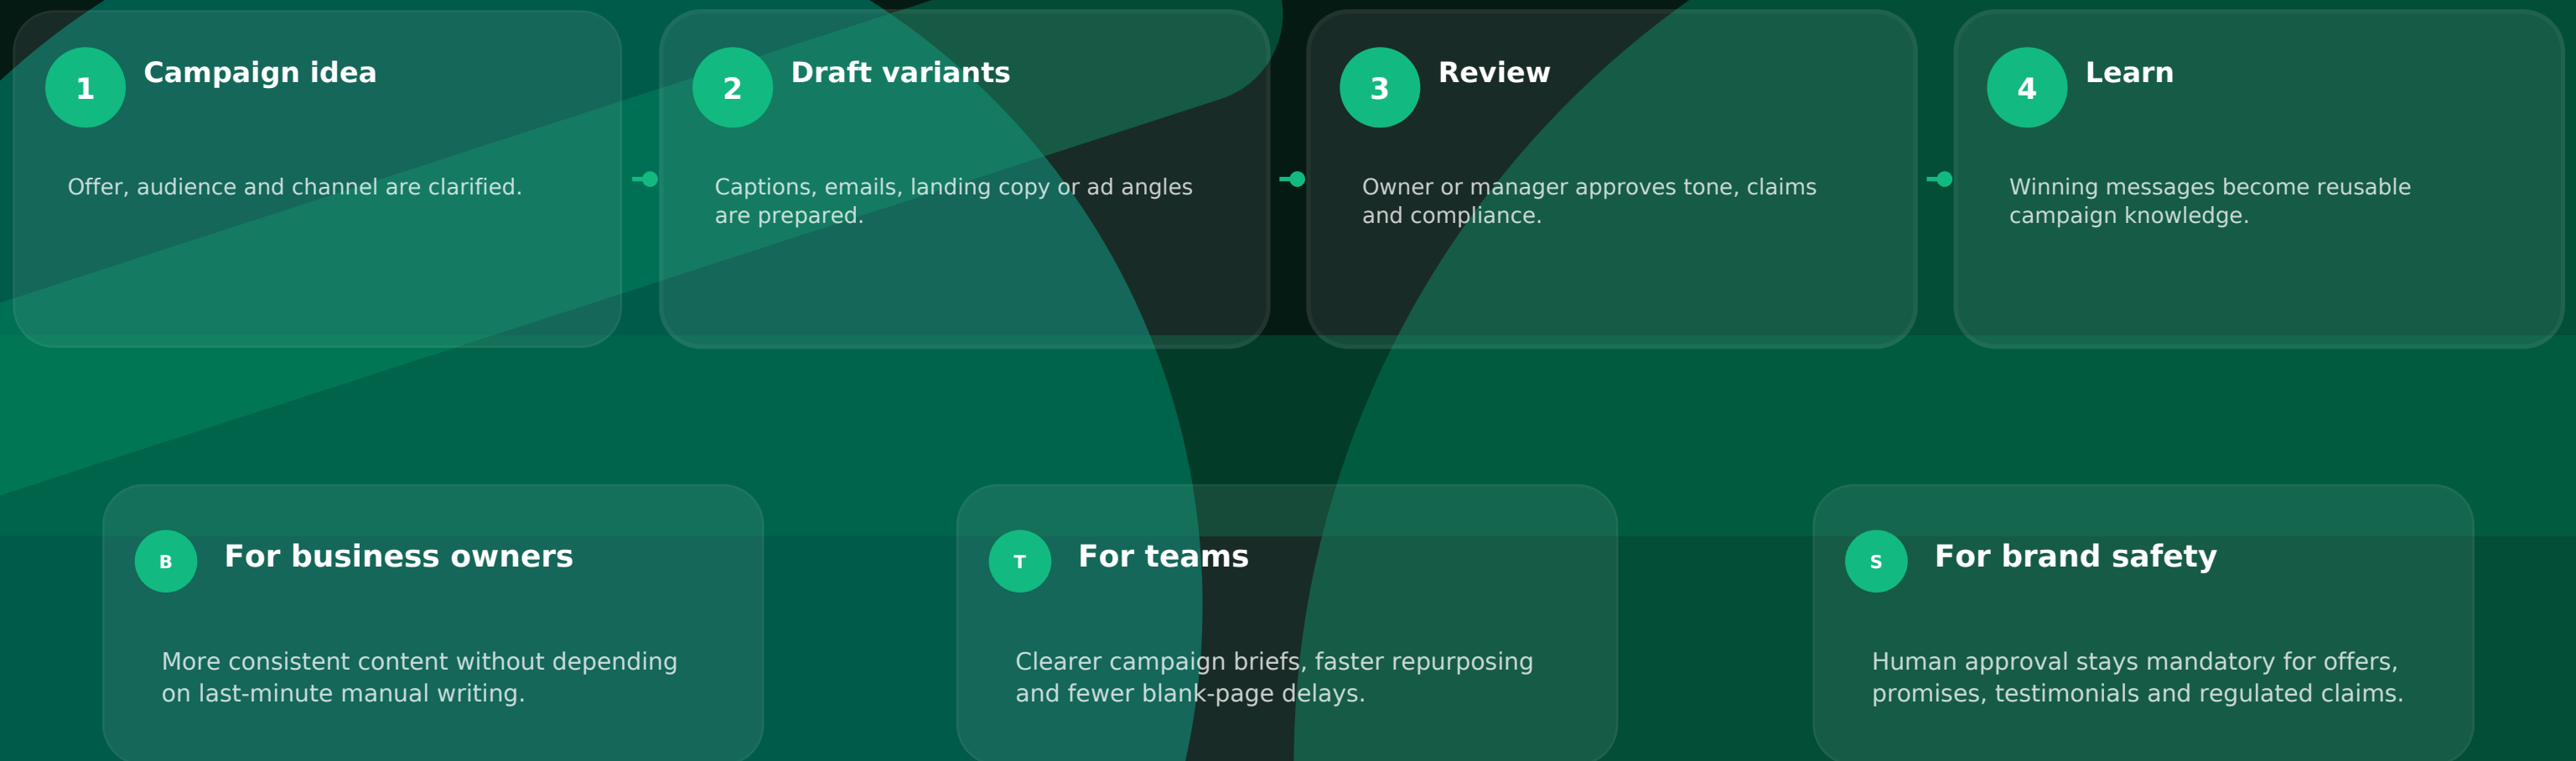

O Owner benefit

Faster onboarding, fewer repeated internal questions and more consistent service quality.

SERVICE 04

Keep marketing moving without losing brand control.

LetssAI helps small teams turn campaign ideas into drafts, checklists and approvals - while people keep final creative judgment.

SERVICE 05

Appointments, reminders and feedback with less chasing.

For clinics, education businesses, real estate teams and service providers where missed calls and late follow-ups directly affect revenue.

A Appointment support

Capture preferred date, time, location, service need and contact details, then support booking and reminders.

F Feedback calling

Collect structured customer feedback after visits, services, demos or deliveries.

H Human boundary

AI does not make legal, medical, financial or sensitive decisions. It collects information and routes cases.

Bookings and reminders

Track what matters before and after launch

Response time

Follow-ups done

Manual workload

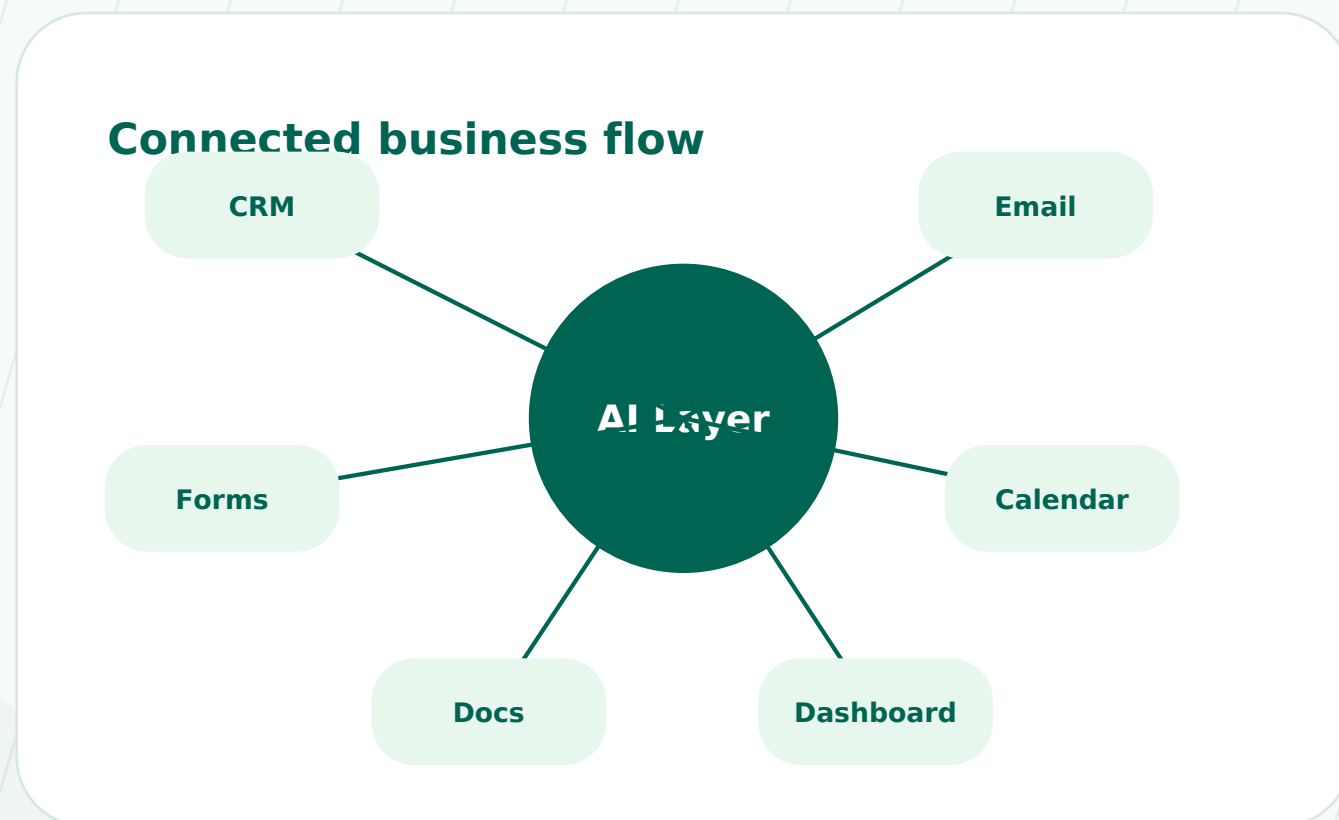

KPIs

- Reduce no-shows with timely reminders.
- Give staff call summaries instead of raw notes.
- Escalate important conversations to the right person.
- Track completed, pending and failed follow-ups.

SERVICES 06-07

Connect the work that currently falls between people and tools.

AI becomes useful when it is connected to real business steps: forms, inboxes, CRM, calendars, documents, dashboards and approvals.

W

Workflow automation

Repeat tasks become step-by-step processes with reminders, assignments and approvals.

S

System integration

Your AI assistant connects to existing tools instead of becoming another isolated app.

O

Owner visibility

Know what is pending, where work is stuck and who needs to act next.

R

Safe rollout

Start small, test with users, keep access controlled and improve from real feedback.

INDUSTRY USE CASES

Built for businesses that live on trust, timing and follow-up.

The same AI foundation is adapted to your business type, customer journey and team workflow.

R Real Estate

Lead capture, property enquiry replies, site visit follow-up and buyer status visibility.

H Healthcare & Clinics

Appointment support, patient FAQs, reminders and front-desk workload reduction.

L Legal Firms

Matter intake, document checklists, client updates and internal knowledge retrieval.

E Education & Coaching

Student enquiries, admission follow-up, class reminders and learner support.

R Retail & E-commerce

Product FAQs, order queries, repeat purchase nudges and support triage.

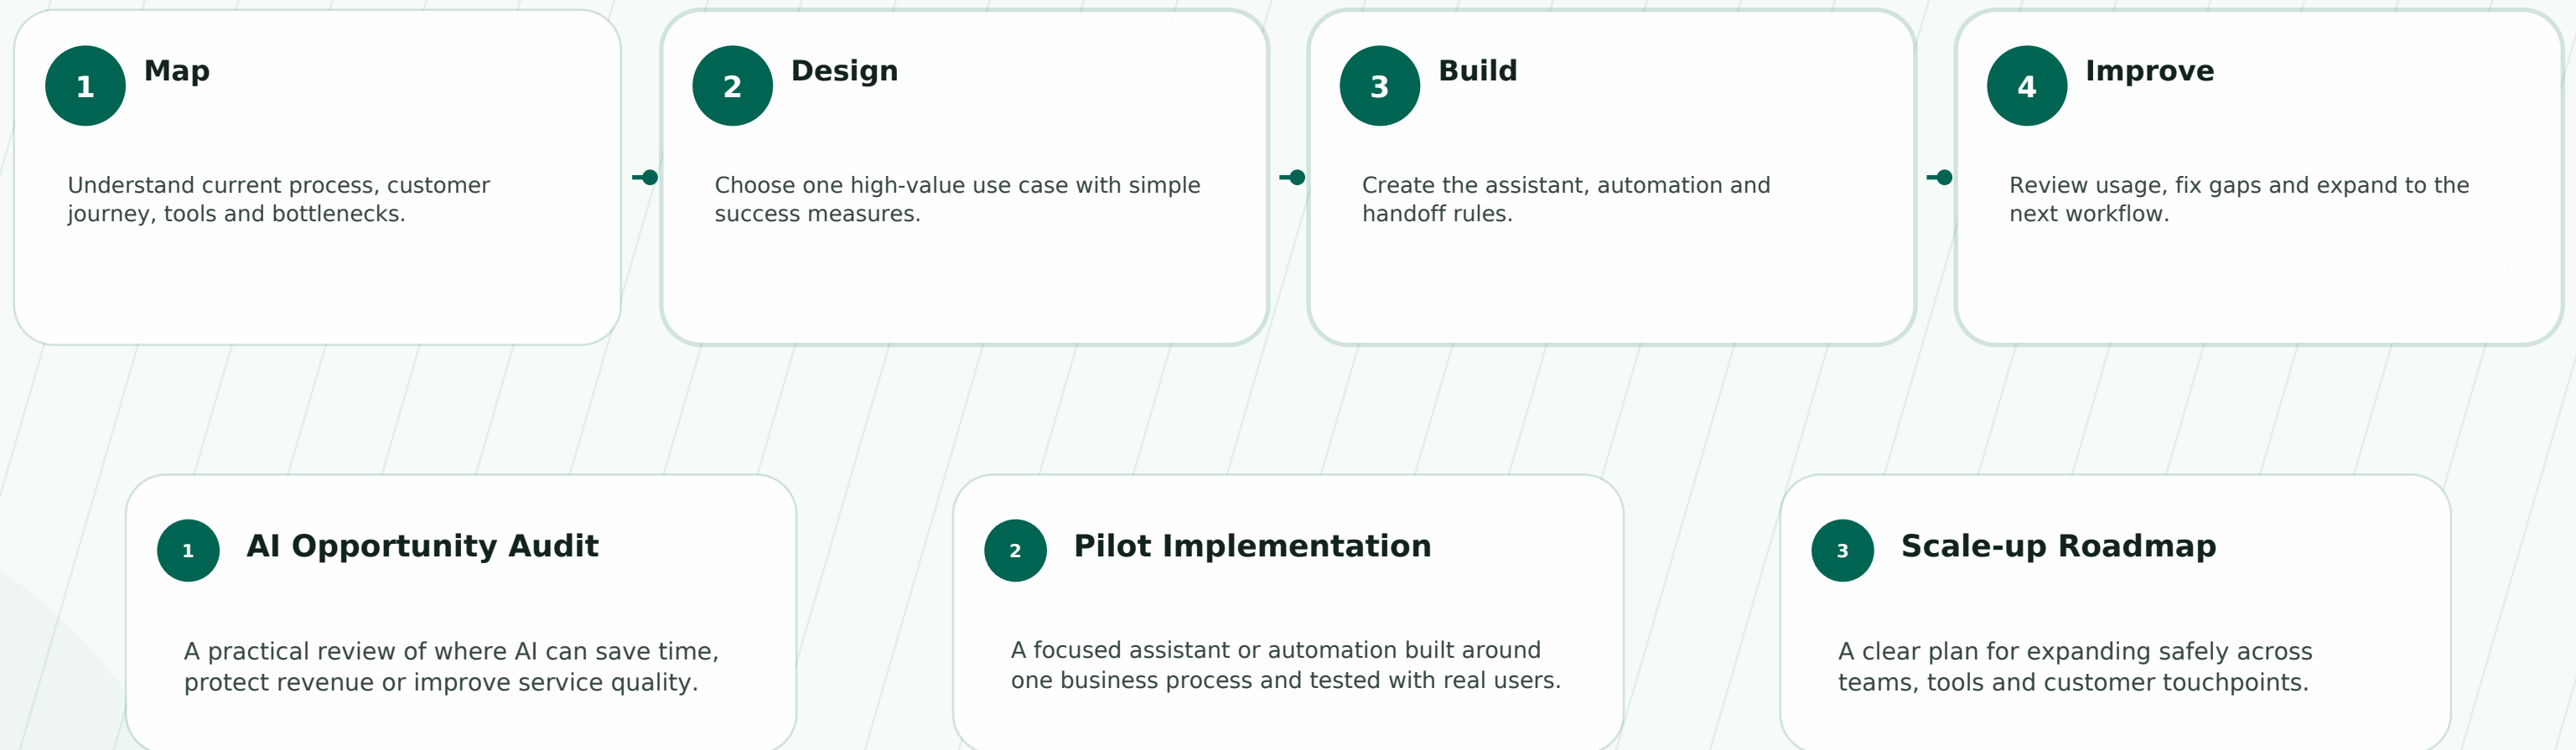

F Finance & Accounting

Document collection, client reminders, workflow tracking and knowledge assistance.

DELIVERY APPROACH

Start with one valuable workflow, then scale what works.

The goal is not a giant transformation on day one. The goal is a useful business improvement that your team can adopt.

MEASUREMENT

Good AI projects should be judged by business movement.

LetssAI recommends tracking a small set of metrics before launch, during pilot and after rollout.

1 Customer response

First response time, repeat question volume, handoff success.

2 Sales momentum

Fresh leads contacted, follow-up completion, booked conversations.

3 Team productivity

Manual hours reduced, task completion time, pending-work visibility.

4 Customer experience

Resolution quality, no-show reduction, feedback themes.

5 Revenue support

Opportunities captured, repeat purchases, quote/demo follow-through.

6 Control and trust

Approved answer rate, escalation quality, access and review discipline.

Important: We do not promise magic numbers. We define the baseline, measure the workflow and improve what creates visible business value.

CHATBOT-READY KNOWLEDGE

Clear answers your LetssAI chatbot can learn from.

These pages are written in direct Q&A form so they can be indexed into a chatbot knowledge base without relying on hidden context.

What does LetssAI do?

LetssAI builds practical AI assistants and workflow automation systems for businesses that want faster replies, better lead follow-up, cleaner operations and clearer team visibility.

Who is LetssAI for?

LetssAI is for owners and teams in real estate, healthcare clinics, legal firms, education, retail, e-commerce, finance, accounting and service businesses.

What problem does LetssAI solve first?

LetssAI focuses on missed enquiries, slow responses, scattered knowledge, repetitive manual work and poor follow-up visibility.

Does AI replace the team?

No. LetssAI designs AI to support staff, collect information, answer approved questions and escalate important or sensitive cases to humans.

CHATBOT-READY KNOWLEDGE

More answers for service, value and safe starting.

These answers help the LetssAI chatbot explain the company in business-friendly language for non-technical buyers.

What services are offered?

LetssAI offers AI customer support, AI sales follow-up, AI knowledge assistants, AI marketing support, AI calling and booking, workflow automation and system integration.

How is business value measured?

Typical measures include response time, follow-up completion, manual workload, customer experience, pipeline visibility and opportunities captured.

What is the safest way to start?

Start with one high-value workflow, launch a controlled pilot, measure adoption, improve from real feedback and expand only after the first workflow is useful.

How can someone contact LetssAI?

Email sales@letssai.com, call +91 7980314116 or visit letssai.com.

NEXT STEP

Bring one messy business workflow. We will help you turn it into a clearer AI opportunity.

Good starting points: repeated customer questions, slow lead follow-up, scattered internal documents, appointment reminders, manual reporting, document collection or daily task handoffs.
